

EP096AT Tripod

Multi-Pull

THE SYSTEM FOR SHOOTING
GROUND AUTOMATION

■ EP096AT Tripod for Microphone

A variety of accessories, in addition to the EP095M control unit, may complete the installation of a single automated range, thus allowing immediate operation and full integration with other units.

EP096AT tripod to hold up microphone is usually situated in front of every shooting stand. It is a robust support with a pleasant aspect and very practical because it is possible to split it in two ways with a small volume. This product feature allows cost saving for shipment and facilitate the installation on the shooting range. The tripod can be supplied with the following options:

Option – C: waterproof plug supplied with the tripod. So that the tripod itself can be removed and plugged in a different socket positioned for another discipline [as required for Skeet, for instance, or for Olympic Trench] or properly stored when not in use.

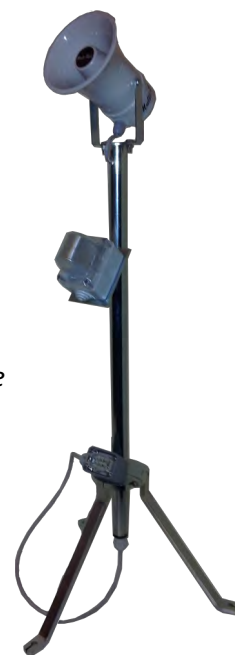

Option – L: waterproof lamp-holder with a Led lamp, that signals which stand is the active stand, that is the stand where the call from the shooter shooting next is expected. It favour athlete's concentration in case of no-bird.

Option – P: push-button for No-Bird. This product simplify the target repetition, mainly when it is in use the coin box, that is the shooting range is used without personnel.

Option – T: corresponding waterproof socket with a small metallic support for the waterproof plug of the tripod. Galvanized and painted.

■ Display for Compak EP096AD

The Display **EP096AD** is especially used for Compak disciplines as it indicates to the athlete the next target that will be thrown from the stand from which he will have to shoot.

In addition, three LEDs will indicate if it is the last target of the round and for the doubles, if it is a simultaneous double or a double on-report.

The active stand will be indicated by flashing the display.

This accessory, normally mounted on the **EP096AT** tripod, is driven directly by the **EP095M** control unit and can be replaced with the common stand lamp in a simple way without having to wire new cables.

For all other disciplines, the **EP096AD** display works like the stand lamp and gives information on the type of target that will be thrown as often as the regulations allow.

Simplify the management of the range, better inform the athletes and the referee of the competition.

EP096AF Microphone

THE SYSTEM FOR SHOOTING
GROUND AUTOMATION

■ EP096AF - 40 Microphone

Is a robust aluminium device with 40 Ohms impedance and with a very large frequency response. It is most appropriate for grounds where important competitions are held.

Being made of aluminum and having the possibility to replace the internal membrane, it represents a product with an extremely long life.

*This microphone, together with the **EP096AT tripod**, has been chosen for the last 5 Olympics Games and for countless Championships and World Cups.*

■ EP096AF - 8 Microphone

Is a device with 8 Ohms impedance, maximum sensitivity at 1kHz and a rated power of 8 W. It's the best if price is compared with quality

■ Protection Cover

The protective headset for a microphone is a very important accessory. Protects the microphone from insects, dirt that can settle in the cone and rain. It is made with a water resistant cloth with an elastic to stop it.
